- Online Admin to manage everything
- Flawless Database interaction

Benefits

- Increase in sales
- reduction in complaints
- Easy Browsing and navigation
- Passengers could easily book and pay.
- Drivers could perform their duties admirably
- Admin managed without difficulty.

The Client: A Spot Taxi Booking Company

The spot taxi booking demand is growing exponentially and is already now a billion-dollar industry with ever increasing user base. With rapidly changing business rules in this industry, businesses have to provide value to customers, like an innovative app to book a cab, immediate availability, reliable services and competitive pricing.

Summary:

For this Direction Software LLP has developed a complete taxi booking solution by building **passenger app, driver app and supporting administrative** panel that is highly reliable and scalable. Direction Software LLP Cab booking solution is available on both iOS platform & Android platform.

Direction Software LLP can accept unique requirements of your business, develop and deliver them swiftly and help your business succeed.

Challenges:

App UI, Passenger App, Driver App & Admin.

The client needed an app for all aspects of Cab Booking and which is easy to understand and navigate.

The Passenger App to contain:

- Various aspects of Bookings and Payments
- Real time map plotting and time estimates
- Cab details, Invoicing facility

The Driver App to contain:

- Various aspects of Bookings related to Driver requirements
- Real time map plotting and time estimates
- History of trips taken with filter facility

An online Admin facility to manage:

- Locations and Vehicles
- Passengers, Drivers, Feedbacks and Disputes
- Bookings, Finance and Documentation

Interaction of the app **with the database**, which is constantly updated.

The Solution

Well-designed User Interface, Better planning & Technology, and Development within specified period.

New ideas were presented, discussed & updated, with complete client involvement at every stage. The solutions implemented were as follows:

The Passenger App

- Normal registration or via Facebook or Google
- A Map with Users current location, Change of Pickup/Drop off location and Real-time drivers location
- Estimated time of arrival (ETA) of the nearest driver, Different Cab types and cab details including pricing
- Book cab facility and Payment screen displaying all registered credit cards with ability to add /remove
- Booking screen with trip history, date filter, date of journey, source, destination, distance travelled, trip cost and map to display route that was taken.
- Settings screen with edit profile and change password
- Driver information on accepting booking request
- In-App notifications with updated journey/driver status
- Invoice generation having Trip cost, source, destination, distance, Rate the Journey, Post feedback, Report dispute, etc.

The Driver App

- Driver Login
- A Map with Users current location, Change of Pickup/Drop off location and Real-time drivers location
- Real time receipt of booking requests and confirmation
- Ability to reject passenger requests
- Status update notification to passenger
- Set status availability/unavailability
- Booking screen displays all the trips taken by them & with Date Filter.
- Specific trip details like date of journey, source, destination, distance travelled, trip cost and map to display route that was taken.
- Settings to edit profile information.

The Solution (Continued)

The Online Admin

- Manage Admin Users & Authorization
- Add/Modify cities, multi-city scalability option
- Add/Modify companies. Also multi company option for taxi aggregators
- Add/Modify vehicle details. Track vehicle if is offline, free for booking, currently booked etc.
- Classify vehicle as Taxi, SUV, Sedan etc.
- Register and manage drivers
- View Passenger information provided on registration
- View bookings including booking history and complete booking details
- View bookings cancelled including reason
- Invoice details of bookings and export it to PDF
- Document details of all the registered vehicles
- Passenger feedback on journey & any dispute reported

Technology

- Platform: Native
- Operating System: Linux
- Database: MySQL 5
- Web Server: Apache
- Scripting Engine: PHP
- No SQL database: Mongo DB
- Communication: Pubnub
