

# SIX REASONS TO MIGRATE

from Microsoft NAV to  
Microsoft Dynamics 365 Business Central

1

## Upgraded Version with Enhanced Capabilities

Microsoft has ceased offering new licenses and upgrades for NAV, pushing users towards Business Central, which not only mirrors NAV's functionality but also enhances it. The new on-premise version retains familiar operations while providing superior capabilities and supports both on-cloud and on-premise deployment.

## Flexible Pay-Per-Use and Scalability

With Business Central's cloud model, businesses benefit from a pay-per-use subscription structure that accommodates growth. This flexibility allows companies to scale up easily by adding user licenses in accordance with their expanding operations.

2

3

## Cost-Effective Solution

Transitioning to Business Central can significantly reduce costs associated with maintaining NAV. Unlike NAV, which requires costly updates and infrastructure investments, Business Central offers automatic updates as part of its subscription, improving compatibility with customizations and eliminating additional expenses.

## Robust Integration Capabilities

Business Central is designed for seamless integration with Microsoft tools and a vast marketplace of third-party applications through AppSource. This feature enables businesses to tailor end-to-end solutions considering their unique operational needs.

4

5

## User-Friendly Modern Interface

The intuitive, web-optimized interface of Business Central aligns closely with familiar Microsoft products, reducing the learning curve and enhancing user adoption while improving navigation and overall usability compared to NAV.

## Advanced Business Insights and Automation

Business Central consolidates enterprise data for real-time insights, enhancing decision-making through AI and ML capabilities when integrated with the Power Platform. Furthermore, it automates routine tasks, boosting productivity and allowing employees to focus on strategic objectives.
